

Dargle

PRODUCT SPECIFICATION

Fibre System	Pile: 100% wool – Backing, Synthetic Jute
Construction	5/32 gauge – Ribbed loop pile
Width	4.00 meters
Weight	50oz
Primary Backing	Woven Synthetic
Secondary Backing	RE-PET Synthetic Jute
Installation	Recommended for cushion installations
Pattern Repeat	N/A
Chair Protection	Mandatory under castor chairs
Residential wear Classification	Residential Heavy Duty including stairs
Warranty	15-year Residential Limited warranty 7-year moth resistance warranty

House & Haven carpets must be installed in accordance with Australian Floor Coverings Installation Standards ASNZS 2455 -1- 2007.

New underlay suited to purpose must be used and all edges to be seamed must firstly be sealed with an edge sealing adhesive and then seamed with an appropriate hot melt adhesive seaming tape. All unprotected edges must be sealed with an edge sealing adhesive.

As is the case with all wool carpets. Do not use a vacuum with a power-driven head and hard bristles. This will damage your wool carpet.

Pattern match cannot be guaranteed. Irregularities may be visible particularly when viewed over multiple widths.

According to international carpet manufacturing norms colour and texture may vary from the sample and between production batches. Manufacturing tolerances +- 5% (whichever is greater) as per AS1385

Natural & Neutral wool carpets are treated with an insect resist agent to deter an infestation of fibre eating carpet beetle and clothes moth. The insect resist agent works by consumption so fibre loss to your carpet may occur. Preventative measures include regular and thorough vacuuming, especially in areas around and under furniture that is not moved frequently, and along skirting boards.
